 OBIEE 10g/11g and Oracle Applications solutions

Job Description

Work as a subject matter expert on Oracles overall product footprint (OBIEE 10g/11g and Oracle Applications solutions)
Implement the following Oracle Application Fusion Editions: Financial Analytics, Supply Chain and Order Management Analytics, Procurement and Spend Analytics for Northrop Grumman.
Leverage knowledge of current data warehouse and software development methodologies along with a good understanding of Oracle pre-built applications to contribute to the overall planning of project by recommending approaches, identifying resources, and developing timelines.
Translate high-level business requirements into a logical business dimensional model and define key metrics, dimensions, hierarchies and attributes while conducting gap analysis in order to maximize utilization of out of the box functionality
Enhance analytics server metadata based on business requirements for custom application and extend Oracle Business Analytics Warehouse (OBAW) and lead the design and development of customization to Informatica ETL mappings and DAC execution plans.
Support sales team through providing implementation estimates, assist with proposals, Demos and participate in client interviews.
Install Analytics Server and ETL/DAC platform components in Development, and Production Environment for Oracle 7.9.6.3 sourcing data from R12.
