Mandatory Skills

Agile, Scrum, XP, Waterfall, Erwin, MS Visio, SQL Query Analyzer, Quality Center, Mic

Job Description

Develop and document functional specifications and detailed designs for applications and databases from which programs will be coded, tested and debugged.
Communicate effectively and explain business functions to programmers and technology to non-technical business users.
Estimate time and effort for development tasks and coordinate with the Project Manager for incorporating estimates into project schedules.
Maintain a consistently high-level of quality for developed code using sound unit testing and debugging principles.
Mentor team members to ensure software is developed in compliance with established methodologies, architectural and development standards and best practices.
Perform maintenance and support of existing applications and assist in troubleshooting software application issues as required by the support team.
Review emerging technologies and participate in determining the future technology direction for the department.
